## Creative Writing Skills : Letter to Editor

1. Accidents in big cities are a common phenomenon. Unfortunately, hardly anyone comes to the rescue of road victims because of fear of harassment by the police. Now that the Supreme Court has issued guidelines that people who take road victims to a hospital will not be questioned or detained, there is no reason why the bystanders/passers-by should hesitate to help road victims and thus discharge their duty as responsible citizens. Write a letter to the editor of a national daily, requesting him to make people aware of Supreme Court guidelines and urge them to help people in distress. You are Shyam /Shobha, 24, Raj Nagar, Kanpur.
2. You are Gobind/Geeta, a resident of Sector 37-C Chandigarh. You feel that the purpose of media is to create awareness. But sometimes, in a bid to sell, the news is made more sensational, what is relatively unimportant is overemphasized, and what is important is ignored. In the light of this write a letter to the Editor 'The Tribune' giving inputs on the pros and cons of media.

- As compared to daytime, the amount of carbon dioxide released by the plants during night is more because:
  - It is not produced during daytime.
  - It is stored in the leaves of plants during daytime.
  - Major amount of carbon dioxide produced is used up for photosynthesis during daytime.
  - Plants do not respire during daytime.
- In which of the following vertebrate group/groups, the separation of right side and left side of the heart is exhibited to keep oxygenated and deoxygenated blood from mixing?

- Assertion:** Diffusion is the movement of particles from their area of higher concentration to lower concentration.  
**Reason:** Diffusion occurs only in the liquid state.
- Assertion:** The transport of water and minerals in xylem is unidirectional and does not need any energy for the transportation.  
**Reason:** The transport of food prepared by the leaves in phloem is bidirectional and uses energy for the transportation.
- How are oxygen and carbon dioxide transported in our body?
- In which part of alimentary canal, digestion does not occur?
  - Pepsin is released by the gastric glands present in the wall of the stomach but the stomach wall is not digested by this enzyme. Explain.
- What is translocation? Which elements of phloem translocate the food material and in which direction? Which substances are translocated besides the products of photosynthesis?
- Give reasons
  - The small intestine in herbivores is longer than in carnivores.
  - The rate of breathing in aquatic organisms is much faster than in terrestrial organisms.
  - Blood circulation in human heart is called double circulation.
- Define excretion. Draw human excretory system and label the following parts in it:
    - Left renal artery
    - Aorta
    - Urethra
    - Right Kidney
  - Explain the formation of urine in human beings.
- Terrestrial organisms use the oxygen in the atmosphere for respiration. Different animals have evolved different organs for the uptake of oxygen from the environment and for getting rid of the carbon dioxide produced. The given diagram is of human respiratory system.

- Identify the labels A, B, C, D and E. Out of these parts, which one has rings of cartilage?
  - What is the function of parts labelled as A and C?
